DETAILED ACTION

1. The RCE and amendment, filed 05/16/07 has being acknowledged and entered. By this amendment, claims 1-4 and 7-19 are pending in the application.

Drawings

2. The drawings, filed on 01/13/04, are accepted.

Specification

3. Applicants' cooperation is requested in correcting any errors of which applicants may become aware in the specification.

EXAMINER'S AMENDMENT

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Siddhesh V. Pandit on May 24, 2007.

The application has been amended as follows:

Please cancel claim 6.

In claim 7, line 1, please delete "claim 6" and insert - -claim 1--.

In claim 9, line 1, please delete "claim 5, wherein the monitoring unit" and insert -
-claim 1, wherein a monitoring unit --.

Reasons for Allowance

5. Claims 1-4 and 7-19 are allowed.
6. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to disclose or reasonably suggest all the limitations recited in claim 1. Specifically, the prior art of record fails to disclose an optical assembly for coupling an optical device to an optical fiber, comprising a lens including a reflecting curved surface for bending and confining a light beam and a focusing curved surface for focusing the light beam, wherein the lens includes an elongated, non-spherical section and the path of the light beam traverses the elongated, non-spherical section between the reflecting curved surface and the focusing curved surface and further wherein the lens is a lens assembly having at least two mating parts, a first mating part including the reflecting surface and a second mating part including the focusing surface, and wherein each of the first and second mating parts include at least one substantially flat mating surface for engaging each other and the substantially fiat mating surfaces are in the optical path of the beam, and at least one of the substantially fiat mating surfaces has a reflective portion shaped to reflect a portion of the beam along a monitoring path in combination with the other limitations of claim 1.

Claims 2-4 and 7-19 depend from claim 1.

Art Unit: 2874

7. A close prior art of record is Zhang (U.S. Patent 6,856,728). Zhang discloses a lensed fiber optic coupler having an elongated, non-spherical section with a reflecting curved surface and a focusing curved surface. However, Zhang does not particularly teach the lens including two mating parts, each has at least one substantially flat mating surface for engaging each other and the substantially fiat mating surfaces are in the optical path of the beam, and has a reflective portion shaped to reflect a portion of the beam along a monitoring path.

Therefore, claims 1-4 and 7-19 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
